## SOFTWARE DEVELOPER

Shaun spends most of his time on software development for eAuditNet, PRI's proprietary, custom-built web-based software, which is used by PRI staff, customers and contractors all over the world

Having been an IT engineering support contractor, I have had exposure to a number of workplace environments through my career. I was attracted to PRI for a number of reasons.

I like the culture of the organization, because it is inclusive and friendly. Unlike larger companies, where you may not know everyone's name - and they don't know yours either - PRI is able to foster a culture where the staff matter. Despite having offices around the world, there is still a sense that you are not just a number: you are a person whose views count, and you are treated in a respectful way. The people here are good people, not just good workers. That means a lot to me.

PRI is also supportive of staff who want to expand their skillset and I have had the opportunity to attend a few technology conventions with fascinating lectures that I really enjoyed and benefitted from. I was able to bring what I learned back to my work, which was great. My team is also doing technology upgrades to help make my job easier and allow me to develop new skills.

In addition, the working environment itself is comfortable. I have the space I need to do a good job, whether that means having some quiet time to work on software development alone, or getting together with the team to discuss how to tackle a particular challenge.

Because my job needs intense focus, I like to take

small breaks to stretch. I can do that without worrying about it, because I know my supervisor trusts me.

In the bigger picture, I am proud to be part of an organization that plays a key role in helping to keep people safe. From aerospace to medical devices and more, we help global industries improve oversight of their supply chains.

While individually, our contribution may be small, together with shared purpose, as a company, we make a difference, and our work truly matters. This is very important to me, and if I wasn't working at PRI, I hope I would be a software developer at a company whose values and mission matched those of PRI.

Based in Warrendale, Pennsylvania, USA

Joined PRI in 2016

BS Computer Science  
BS Computer Engineering

Enjoys the fact that he doesn't just feel like a number as an employee
